GEVORG NERSESIAN

Yerevan, Armenia – gnersesian@proton.me
website – LinkedIn – GitHub

EDUCATION

American University of Armenia (AUA) — Yerevan, Armenia
Bachelor of Science in Computer Science — August 2021 – June 2025
Capstone: Methods for Armenian Epigraphic Inscription Recognition

- Track: Mathematical Modeling
- Noubar Afeyan Foundation Grant

EXPERIENCE

Align Technology — Yerevan, Armenia
Machine Learning Engineer — July 2025 – Present
Machine Learning Intern — July 2024 – June 2025

- Conduct experiments to fine-tune detection, classification, and OCR models for the quality initiative team
- Work on low-resource datasets, applying targeted augmentation and preprocessing to improve model generalization
- Developed a data preprocessing automation as a part of the continuous improvement pipeline for defect detection and classification models
- Analyze production data to resolve low to medium level bugs as well as identify false detection cases to enhance the models

AUA College of Science and Engineering (AUA CSE) — Yerevan, Armenia
Junior Researcher — June 2025 – Present
Student Researcher — March 2025 – May 2025

- Research into an OCR pipeline for Armenian epigraphic inscriptions, with a current focus on cleaning and structuring highly noisy image data, and exploring ML/DL methods for robust text detection, segmentation, and recognition in carved stone surfaces. Supervised by Dr Suren Khachatryan.

CERTIFICATES

MIT's MISTI Program at AUA — Yerevan, Armenia
Participant — Seasonal, Winters 2022 - 2023

- An intensive workshop about radiation and its applications by the leading professor of MIT in Nuclear Engineering
- It included a practical part during which I built my own Geiger Counter using the MIT NSE design
- Lead by Dr Areg Danagoulian.

Harvard University's CS50 — ONLINE
Summer 2023

- Deep diving into various areas of computer science and applying in practice specific concepts, such as data structures, resource management, and security
- The course concentrates on widely applicable concepts but also includes more complex low-level languages, such as C, and their features

MIT's Nuclear Detection Course — Yerevan, Armenia
Summer 2022

- Continuation of an earlier workshop. I have worked with a new design of a Geiger Counter and enhanced it by making it more compact, adding and coding a data display. Lead by Dr Areg Danagoulian.

PUBLICATIONS & HONORS

- Afeyan Foundation Research Grant for Armenian stone inscription OCR — 2025
- AUA CSE Research Showcase | placed 4th out of 60 — 2025
- Nersesian et al., *Advancing Armenian Inscription Recognition*. American University of Armenia. — 2025
- Nersesian et al., *Inscription Recognition Using Transformers.* American University of Armenia. *In review* — 2025

SKILLS

- **Languages**: Russian (native), English (C2), Armenian (C1)
- **Coding in**: Python, C, R
- **Stack:** data science (SQL, pandas, numpy, scikit-learn, opencv, pytorch, tensorflow etc.), automation (fastapi, requests, beautiful soup, selenium etc.)
- **Other**: Git, CUDA, AWS, MLflow, Splunk
