PROFESSIONAL EXPERIENCE

Align Technology — Python/ML Intern

JUL 2024 - PRESENT; YEREVAN, ARMENIA

- Collect and prepare large datasets and conduct experiments to fine-tune detection, classification, and OCR models for the quality initiative team.
- Developed a data preprocessing automation as a part of the continuous improvement pipeline for defect detection and classification models.
- Analyze production data to resolve low to medium level bugs as well as identify false detection cases to enhance the models.

EDUCATION

American University of Armenia — BSc in Computer Science

AUG 2021 - JUN 2025 (EXPECTED); YEREVAN, ARMENIA

TRACK: MATH MODELING

Administered by the **University of California: Berkeley**. The program includes deep research of mathematics for programming as well as subjects dependent on it, e.g. machine learning, cryptography, and image processing.

CERTIFICATES

Deep Learning Specialization

NOV 2024 - PRESENT

Currently engaged in this comprehensive series, which covers neural networks, machine learning enhancements, and practical applications through hands-on projects and case studies. This training is preparing me to effectively apply deep learning techniques in real-world scenarios, including general NN, RNN, CNN and LSTM.

Harvard University's CS50

SUMMER 2023

Deep diving into various areas of computer science and applying in practice specific concepts, such as data structures, resource management, and security. The course concentrates on widely applicable concepts but also includes more complex low-level languages, such as C, and their features.

MIT's Nuclear Detection Course

SUMMER 2022; YEREVAN, ARMENIA

Continuation of an earlier workshop. I have worked with a new design of a Geiger Counter and enhanced it by making it more compact, adding and coding a data display.

PROJECTS

MIT's MISTI Program at AUA — Participant

JAN 2022/23 - FEB 2022/23; YEREVAN, ARMENIA

An intensive workshop about radiation and its applications by the leading professor of MIT in Nuclear Engineering. It included a practical part during which I built my own Geiger Counter using the MIT NSE design.

Algo for Crypto Trading — Researcher & Developer

JAN 2021 - MAY 2021

Developed a server-based trading algorithm to capture arbitrage opportunities in altcoin through Binance API, with logging and publishing features.

AWARDS

Afeyan Foundation

Research Grant

2025

Yeghiazaryan Coding Cup

2024 | placed 24th out of 115

Music Certificates (inc.

Laureate of the Moscow

Music Festival)

2016 - PRESENT

SKILLS

Languages:

- Russian (native)
- English (C2)
- Armenian (C1)

Coding in:

- Python
- C
- Java
- R

Tech Stack:

- **Data Science:** pandas, numpy, matplotlib, SQL, opencv, tensorflow, keras
- **Web Dev & Automation:** fastapi, flask, requests, beautiful soup, selenium, jinja2, html+css
- **Cloud:** AWS, Splunk
- Git
- Arduino
