

GEVORG NERSESIAN

gnersesian@proton.me – Yerevan, Armenia

[website](#) – [LinkedIn](#) – [GitHub](#)

EDUCATION

American University of Armenia (AUA)

Bachelor of Science in Computer Science

Capstone: *Methods for Armenian Epigraphic Inscription Recognition*

Yerevan, Armenia

August 2021 – June 2025 (Expected)

- Track: Mathematical Modeling
- Noubar Afeyan Foundation Grant

EXPERIENCE

Align Technology

ML Intern

Yerevan, Armenia

July 2024 – Present

- Conduct experiments to fine-tune detection, classification, and OCR models for the quality initiative team
- Work on low-resource datasets, applying targeted augmentation and preprocessing to improve model generalization
- Developed a data preprocessing automation as a part of the continuous improvement pipeline for defect detection and classification models
- Analyze production data to resolve low to medium level bugs as well as identify false detection cases to enhance the models

AUA College of Science and Engineering

Student Researcher

Yerevan, Armenia

March 2025 – Present

- Research into an OCR pipeline for Armenian epigraphic inscriptions, with a current focus on cleaning and structuring highly noisy image data, and exploring ML/DL methods for robust text detection, segmentation, and recognition in carved stone surfaces

PROJECTS

MIT's MISTI Program at AUA

Participant

Yerevan, Armenia

Seasonal, Winters 2022 - 2023

- An intensive workshop about radiation and its applications by the leading professor of MIT in Nuclear Engineering
- It included a practical part during which I built my own Geiger Counter using the MIT NSE design

Algo for Crypto Trading

Researcher & Developer

Yerevan, Armenia

January 2021 - May 2021

- Developed a server-based trading algorithm to capture arbitrage opportunities in altcoin through Binance API, with logging and publishing features

CERTIFICATES

MIT's Nuclear Detection Course

Yerevan, Armenia

Summer 2022

- Continuation of an earlier workshop. I have worked with a new design of a Geiger Counter and enhanced it by making it more compact, adding and coding a data display

Harvard University's CS50

ONLINE

Summer 2023

- Deep diving into various areas of computer science and applying in practice specific concepts, such as data structures, resource management, and security
- The course concentrates on widely applicable concepts but also includes more complex low-level languages, such as C, and their features

HONORS & INVOLVEMENT

- Afeyan Foundation Research Grant for Armenian stone inscription OCR 2025
- Yeghiazaryan Coding Cup | placed 24th out of 115 2024

SKILLS

- **Languages:** Russian (native), English (C2), Armenian (C1)
- **Coding in:** Python, C, R
- **Stack:** data science (SQL, pandas, numpy, opencv, tensorflow etc.), automation (fastapi, requests, beautiful soup, selenium etc.)
- **Other:** AWS, Splunk, Git
